

### What went well

Achieving the goals that we had set for sprint 1.  
Making skeleton pages for the app  
Creating navigation across the activities  
Making an API gather restaurants based on location  
Creating a function to return 1 randomly selected restaurant.

### What didn't go well

The google places API  
Distribution of work between members. Some members did a disproportionate amount of work compared to others.

### What could be improved

Reuse of code  
Working together for work instead of individual

### Challenges

Finding an API that we could use and would provide functionality we needed.

Google decided to update their places API two weeks before we started, making it difficult to work.
